

Returnee's Report

Name	Takashi Nishiyama
Department	Computer Science and Engineering
Grade	2 nd of master degree
NITECH Advisor	Tsuyoshi Nakamura
Exchange University	ESIGELEC
Exchange University Advisor	Cecilia Brunel
Country, City	Rouen, France
Duration	8.31.2010 – 9.30.2010 (31 days)

Program Report

<Program Contents>

We had programs about information technology and French. We learnt the database management system and meta-heuristics technique as information technology class. After the lectures were finished, we did project work for each class

We programmed and made presentation about computational difficulty problems like N Queen problem, knapsack problem, traveling salesman problem in meta-heuristics class

We designed database of an art gallery as database project. We made presentation with SQL demonstration about the art gallery database system

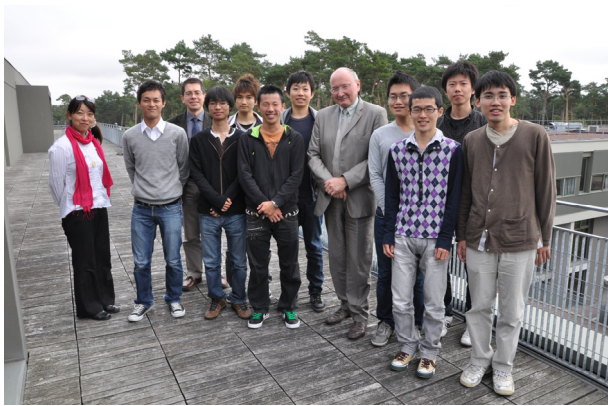

<Achievements/Ambitions>

I could understand the contents of lectures through projects. I recognized that discussion in groups is important through project works

Now, I would like to use knowledge of meta-heuristics and database in my laboratory. I would like to discuss actively in seminar and academic conference

In addition, I think I must study to communicate in foreign language. Because I was often confused when I needed to reply in English or French

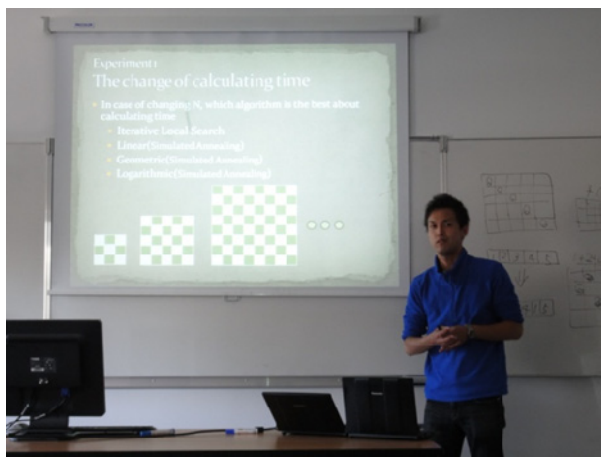

In future, I study hard foreign languages, and I would like to research and work globally.

Breakfast with ESIGELEC president

Party with foreign students

Presentation of our project
