

Returnee's Report

Name	Kenshiro Hotta
Department	Scientific and Engineering Simulation
Grade	Second Grade in Masters Course
NITECH Advisor	Akira Iwata
Exchange University	ESIGELEC
Exchange University Advisor	Ms. Cecilia BRUNEL
Country, City	Rouen, France
Duration	8.31.2010 – 9.30.2010 (31 days)

Program Report

<Program Contents>

This program consists of information technology part and French cultural part.

In information technology part, I learned about database and meta-heuristics. I acquire practical and useful knowledge by group work and final presentation. I enjoyed my group work team consisting of members who have different ability, grade, and specialty. It is the good opportunity to look back on my life.

On the other hand, in French cultural part, I learned French and I aggressively tried to communicate with French in daily life. And I visited companies, museum and valuable historical place with French people. Especially, I was very excited at company tours because I rarely, if ever, visit the company in foreign country.

<Achievements/Ambitions>

I acquired very practical and useful knowledge, not only by the simple classroom lecture but also group work, final presentation, company tours, and so on. I feel differences between Japan and France, and I learn about each other's strengths and weaknesses.

I am sure that this program broadens my horizons because it consisted of many kinds of valuable contents. This program was the excellent way for me to learn an international perspective.

In the future, I want to have a international and wide perspective to proceed with my research and I want to be an excellent engineer. If there is a suitable occasion, I aggressively tried to interact with another country people.
