

## Returnee's Report

Name	Higashiguchi Kohei
Department	Environmental and Materials Engineering
Grade	B4
NITECH Advisor	Prof. Dr. Yuji Iwamoto
Exchange University	ICL, UEN
Country, City	UK, London / Germany, Erlangen
Duration	3.5.2011 – 3.13.2011 (9 days)

### **Program Report**

#### <Program Contents>

I visited laboratories in foreign colleges to learn about the working environment and research facilities.

ICL has a lot of high performance equipments like TEM or TG・DTA, because of this, I feel it possible to do high level research. And working space is open, like the office, laboratory members can discuss together there.

In UEN, collaboration researches are being carried out actively to develop new materials added new functions and new procedures using strong points of respective laboratories. Also, at this college, I made the presentation about my research in English, I found out problems regarding presentation skills.

#### <Achievements/Ambitions>

During this tour, I directly experienced differences in lifestyle, culture and sense of value between Japan and foreign countries.

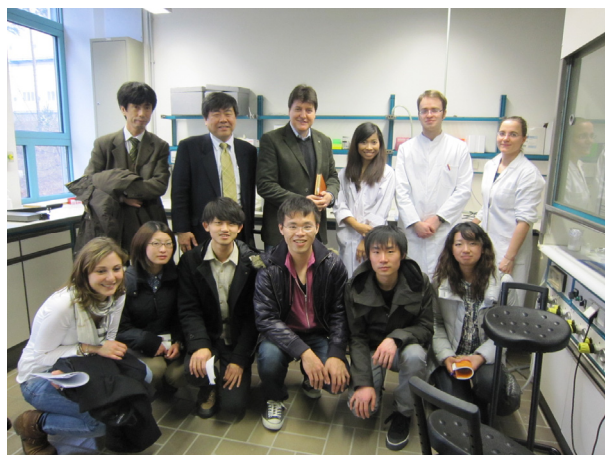

And I made presentation in English for the first time at UEN. In the preparation for it, I devised slides to enable foreign researchers to understand them by only watching and thought about the way of explanation and speech flow deeply.

Through visit of laboratories and seminars, I can absorb some techniques for my research and deep knowledge in different area of my research.

In the future, I want to study English eagerly and attend the international conferences positively. Also, I gain deep understandings about my research and consider it from the various viewpoints.

1 . The building of ICL

2 . Laboratory tour in UEN

3 . The photograph taken with PhD student of UEN.
