

Returnee's Report

Name	Kawamura Chikako
Department	Life and Materials Engineering
Grade	B4
NITECH Advisor	Associate Prof. Nagata Kenji
Exchange University	Imperial College London, University of Erlangen-Nurnberg
Country, City	England, London / German, Erlangen
Duration	3.5.2011 – 3.13.2011 (9 days)

Program Report

<Program Contents>

At Imperial College London(ICL), I took part in their laboratory tour and ICL's staffs explained analytical equipments installed by ICL. I understood that Imperial College London has many important equipments to analyze various properties of ceramics, for example, XRD, TG/DTA, SIMS and TEM etc.

University of Erlangen-Nurnberg(UEN), I watched around three laboratories and facilities related with Glass and Ceramics, Surface Science and Corrosion and Material Science under the guidance of Dr. Joanna. In addition, I visited Nurnberg by a post-doctor of UEN. And another thing, I learned some episodes about some architecture and the origin of Erlangen from Prof. Peter Greil during Erlangen city visit.

On March 12, five students of Nagoya Institute of Technology and two researchers of FUE made their oral presentations about several studies in English.

<Achievements/Ambitions>

I was impressed by a big scale of analytical equipments and the atmosphere mood of labs and students at ICL and UEN. I thought that I want to learn and study my research and hybrid materials in this environment, and I must develop my English-language ability and experimental skill to research on terms with domestic and international students.

In my presentation, even I'm very nervous in Japanese presentation. Therefore, I was more nervous in English presentation and was shaken after just I made a little mistake. So, I am anxious to presentation skill that I might not be upset in my English presentation.

In this overseas-study, I could only listen to English conversation, but could not understand what they talked in English sufficiently. However, I talked to some

students at ICL and UEN, they spoke to me with good cheer. So, I enjoyed talking in English very well. Any more, during my master course, I would like to improve the conversation skill of English.
